NCTR Reporting Update

NCTR Attribution 14/11/2022

No Criteria to Reside (NCTR) metric was intended as a quality improvement tool to support better discharge planning. It is not measuring the same parameters as Delayed Transfers of Care (DTOC) and cannot be compared to previous years

The 2018 National Guidance on reporting of DTOC contained the following important criteria:

2.5. A patient being classified as medically optimised i.e. NCTR does not equate to them becoming a DTOC and is not sufficient for any delay to be reportable as a DTOC
